Project information

Gas main replacement on
Eagle Way, Great Warley

September 2023

Who we are

We connect customers to the gas they use. We own, run and maintain the gas network in your area, looking after the pipes that bring gas to your home and to local businesses. We don't sell gas – the gas we transport is owned by your gas company but we are responsible for it whilst it's being transported, making sure it's delivered safely to where it's needed.

For more information, please visit us at cadentgas.com.

What work are we doing in this part of Great Warley?

We are upgrading the gas pipes along Eagle Way to ensure you continue to receive a reliable gas supply for many more years to come.

Our aim is to replace all the metallic mains and service pipes in this location. This means that we will need to excavate holes in the ground to access the gas pipes in order to inspect and replace them.

The general illustration below gives you an example of the sort of work we are engaged in.

Compensation

If you own a business in the area which you feel may have been affected by the work we need to do, you may qualify for compensation if you rely on customers visiting your business premises for usual trade to take place.

For a full list of the qualifying criteria and further details visit

www.cadentgas.com/sbc.

Our teams on site

All the team members you will see on site are experienced gas engineers and will be happy to help address any questions you have. The team has a team leader you can talk to and a customer contact – you can identify them by the bright orange high-vis vest they wear. Please feel free to talk to them if you have any concerns.

Your project manager

The project manager for our work on Eagle Way is Daniel French. Daniel has been working in the gas industry for many years and is highly experienced in the delivery of complex gas infrastructure projects.

Customers' special requirements

If you are living in a street affected by our work and you have any special requirements, please make our on-site managers or our customer contact aware. For example, if you have mobility problems and need full access to your property at all times, we can take account of this, but it's good for us to know about it in advance so we can have everything in place.

Communications

Our aim is to ensure everyone who is likely to be affected by our work is kept up to date with our progress. Our team will be visiting all affected properties and talking to as many people as possible to let you know what is happening when.

They will be able to answer questions and provide additional information if you need it.

Will the work affect gas supplies in the area?

An unavoidable consequence of these essential replacement works is that for affected properties we will need to interrupt the gas supply. However, we plan our work to minimise the amount of time anyone is without gas. We will communicate directly with you prior to your gas supply being interrupted. To minimise disruption, this phase of the operation will be carried out in the mornings.

Once the new mains and service supply have been laid, tested and commissioned, our team of 'Gas Safe' registered engineers will complete safety checks on your own internal domestic installation to ensure that all is safe prior to re-establishing your gas supply. These checks are for your own safety and can take some time. However, they are important. Please be aware completion can be as late as 8pm.

If you haven't got gas by 7:30pm, please call our customer care team on **0800 085 4478** and let them know.

We completely understand the need to reduce disruption to your daily lives as far as possible, and will do everything we can to achieve this.

How are we going to deliver our work?

We are due to start work on 28 August and is expected to be completed on 8 December. If any changes are required, we will keep you informed.

Due to the nature of the work involved, we will be delivering it in a number of phases.

Phase 1

Replace approximately 100m of the existing gas pipe. This phase will be completed under three-way traffic lights.

Phase 2

Replace approximately 100m of the existing gas pipe. This phase will be complete under a road closure on Essex Way.

Phase 3

Replace approximately 93m of the existing gas pipe. This phase will be completed under two-way traffic lights.

Phase 4

Replace approximately 45m of the existing gas pipe. This phase will be completed under four-way traffic lights.

Phase 5

Replace approximately 85m of the existing gas pipe. This phase will be completed under four-way traffic lights.

Phase 6

Replace approximately 52m of the existing gas pipe. This phase will be completed under two-way traffic lights.

Phase 7

Replace approximately 158m of the existing gas pipe. This phase will be completed under four-way traffic lights.

Phase 8

Replace approximately 95m of the existing gas pipe.

Phase 9

Replace approximately 43m of the existing gas pipe.

Phase 10

Replace approximately 215m of the existing gas pipe. This phase will be completed under a road closure and three-way lights at Warley Gap.

Phase 11

Replace approximately 106m of the existing gas pipe.

As work progresses we will provide updates on our project website. See QR code below or visit:
